

Exhaust Pipe Maintenance

The exhaust pipe is titanium and stainless steel, but may become stained by oil or mud. If necessary, remove heat stains with a liquid kitchen abrasive.

Titanium Muffler Maintenance

The muffler is made of titanium material. While the colour on the surface of the muffler may change due to the heat of exhaust gas, it has no adverse effects to the muffler function.

If the muffler is heated with grease, mud or dust sticking on it, the colour may change irregularly.

To remove mud or dust, use a wet sponge and a mild detergent, then rinse well with clean water.

To remove grease, use a high flash point solvent.

To remove heat stains, use a liquid kitchen abrasive.
