PARKING

- After stopping the motorcycle, shift the transmission into neutral, turn the ignition switch OFF and remove the key.
- Use the side or center stand to support the motorcycle while parked.

CAUTION:

- * Park the motorcycle on firm, level ground to prevent it from falling over.
- * If you park on a slight incline, aim the front of the motorcycle uphill to reduce the possibility of rolling off the side stand or overturning.
- Lock the steering to help prevent theft (page 36).

NOTE:

* When stopping for a short time near traffic at night, the ignition switch may be turned to P and the key removed. This will turn on the taillight to make the motorcycle more visible to traffic. The battery will discharge if the ignition switch is left at P for too long a time.
