

## Starting & Stopping the Engine

---

Always follow the proper starting procedure described below.

For your safety, avoid starting or operating the engine in an enclosed area such as a garage. Your ATV's exhaust contains poisonous carbon monoxide gas which can collect rapidly in an enclosed area and cause illness or death.

Your ATV is equipped with a gear position starter cut-off system. If the transmission is in forward or reverse gear, you must pull in the clutch lever/parking brake lever in order to start the engine.
