

# Engine Idle Speed

---

Refer to *Safety Precautions* on [page 43](#).

## Engine Idle Speed

RIGHT SIDE

(1) throttle stop screw

(+) increase rpm

(-) decrease rpm

The engine must be at normal operating temperature for accurate idle speed adjustment. Ten minutes of stop-and-go riding is sufficient.

Do not attempt to compensate for faults in other systems by adjusting idle speed. See your dealer for regularly scheduled carburetor adjustments.

1. Warm up the engine, shift to neutral and place the motorcycle on its stand.
2. Connect a tachometer, following the tachometer manufacturer's instructions.
3. Adjust idle speed with the throttle stop screw (1).

Idle Speed: 1,400  $\pm$  100 rpm
