

# Load Limits & Guidelines

---

## Load Limits

Following are the load limits for your ATV:

There are limits to how much weight can be carried on your ATV and be pulled in a trailer.

The following load limits apply to standard equipment only. Modifying your ATV, using non-standard equipment, or riding on terrain that is not flat and smooth could further reduce these limits.

**maximum weight capacity**            **485 lb (220 kg)**  
(includes the weight of the rider, all cargo, and accessories.)

**front cargo rack weight limit**        = **66 lb (30 kg)**  
**rear cargo rack weight limit**        = **133 lb (60 kg)**  
**tow weight limit**                        = **850 lb (385 kg)**

(Combined weight of the trailer  
and all cargo in the trailer)

**tongue weight**                            = **30 lb (14 kg)**  
(Weight on the trailer tongue)        **recommended**  
**tongue and rear cargo weight**       = **133 lb (60 kg) maximum**  
(Combined weight on the trailer  
tongue and on the rear cargo  
rack)

Tongue weight can be measured with an ordinary bathroom scale. Place the scale under the tongue, using either a tongue jack or other support to keep the trailer level.

The weight of added accessories will reduce the maximum cargo weight you can carry.
